Press Release

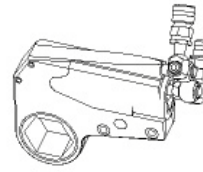

Title: Hydraulic Torque Wrench – TU “ULTRA” Series

TorcUP presents the TU “ULTRA” Series Hydraulic Torque Wrench

Easton, PA.-- The best just got even better! TorcUP realizes that sometimes you need just a little more which is why we are improving our TU series! The TU “Ultra” series combines all of the beneficial features of the TU, from the Multi-Axis Swivels to the Laser Engraved Torque Chart, along with all internal mechanical moving components being machined from **VASCOMAX**! Unlike any other brand of Hydraulic Torque Wrench in the world, TorcUP has created a tool with the major components which create torque out of the **UNDISPUTED STRONGEST MATERIAL KNOWN IN THE INDUSTRY!**

Who says that you have to sacrifice looks for strength? Good looks are just the start, with a distinct advantage added to the drive plate, segment and ratchet. These three components take the brunt of wear and tear, and in the TU “ULTRA”, they are made of Vascomax, which means they are 30% stronger and 15% harder. With US Patent No. **6,068,068**, the TU “ULTRA” will remain distinctive among the field of torque wrenches.

Why now, one may ask, the TU is a dependable work horse, strong enough to meet applications and accurate to +/- 3%? The reason TorcUP redesigned our reliable TU is for those **ULTIMATE** applications...the work that requires brutal and unforgiving usage, especially the wind industry. With a
